K-ARRAY KGEAR KSCAPE

Regarding **audio-visual integration**, applications across

residential and yacht

settings, often share **common requirements.**

Whether you're nestled in the cozy confines of your home or luxurious vacation villa, whether you're seeking solitude in your personal study or basking in the sun aboard your yacht, each of these facets of modern living shares a singular aim: **to craft an environment that is both inviting and of the highest quality, while paying meticulous attention to details such as lighting and sound.**

This guide explores common challenges and unveils the **innovative solutions** K-ARRAY provides. K-array adopts a unique approach, strengthened by seamless collaboration with distinct brands including: KSCAPE, which integrates light and sound into a single product for architectural lighting installations. KGEAR extends K-array's catalogue of unique and cutting-edge solutions with smarter, more traditional options. While maintaining K-ARRAY's high audio quality standards, KGEAR offers system solutions that are particularly valuable when budget considerations are paramount. These synergies equip integrators with comprehensive tools to address challenges effectively.

Our goal is to elevate the audio-visual experience for every ambiance,

turning obstacles into opportunities

crafting a unique space with distinctive audio and lighting.

Harmonizing spaces

In the dynamic environment of residential and yacht spaces, **functionality meets finesse to create not only visual appeal but also auditory excellence.** The challenge is to integrate sophisticated, high-tech audio systems - sometimes merged with lighting when integrating KSCAPE products - that cater to the diverse needs of **modern lifestyles while maintaining the elegance of the decor.**

For installers, architects, interior designers, and integrators, this means **deploying audio solutions that are versatile in function and discrete in design, offering seamless integration into the unique style of each living space**, whether it's a private home or a luxury yacht. It's about ensuring that these systems not only look the part but also deliver **superior performance for any occasion, from quiet relaxation to vibrant gatherings.**

The role of audio in multi-functional living spaces

Audio plays a crucial role in transforming homes into multifaceted sanctuaries. Today's residences are not just living spaces; they are personal gyms, home offices, meditation retreats, and entertainment hubs. As such, the **integration of high-quality audio systems becomes essential in enhancing these diverse activities.**

In the era of smart working, a home is where productivity must peak, requiring audio solutions that **facilitate concentration and privacy.** It's where fitness routines demand the motivational power of music, and relaxation practices like meditation and yoga benefit from the tranquillity of soothing sounds. Home cinema experience relies on immersive sound that captivates and engages, while personal spaces resonate with the soundtrack of our lives, from the latest album of a favourite artist to the strum of a guitar during a quiet evening. **Balancing these audio experiences with moments of silence is key to a harmonious home life.**

Carefully curated sound systems that adapt to indoor and outdoor spaces ensure that whether you're working, unwinding, or entertaining, **the audio environment is tailored to your current activity and mood, enhancing every aspect of life at home.**

Advanced PAT line array speaker solutions:

For residential acoustic challenges

Our line array speakers with Pure Array Technology offer advanced solutions for acoustic challenges in residential spaces. By choosing to install these speakers, it allows for greater directivity and focus, essential for areas that are acoustically complex.

This technology is especially **beneficial for spaces with high ceilings and reverberant materials**, like glass or concrete, which can cause sound distortion and ambient noise. Even in the smallest speakers, this technology **can significantly improve intelligibility,** making it ideal for any residential system.

PURE
ARRAY
TECHNOLOGY

Enhancing any living space with discreet and personalized audio solutions

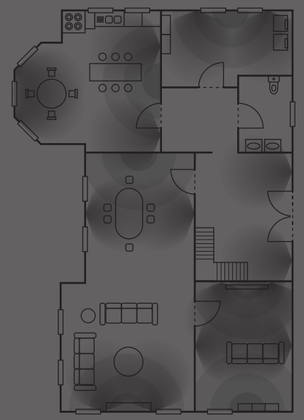

Thanks to our technicians and designers, we can guide our clients from the initial stages of the project to the final installation, meeting the needs of any brief.

Our products offer an ease of in-wall mounting with just a few screws, or recessed options that eliminate the need for special accessories. This streamlined approach **simplifies installation** and ensures a sleek and **unobtrusive appearance thanks to the possibility of customising any product** with a wide range of RAL colors and exquisite premium finishes

By incorporating these solutions into our designs, we can address **acoustic challenges while preserving the aesthetic integrity of the space.**

Balancing sound across spaces

K-CONTROL

In a residential environment, there may be the need to **distribute audio across multiple rooms or zones,** each with **different acoustic characteristics** and usage requirements. All of this is possible thanks to an **integrated, multi-room network system that can be controlled easily via our K-Control** that features a customizable dashboard and a dedicated app to control the devices in a specific space and truly **evaluates the user experience**.

Smart home environment:

Integration with other system

Adjusting the volume of the speakers installed in your garden just from the comfort of your couch or turning on the system or lights just before entering the house is now possible! **K-ARRAY offers different solutions to communicate with the most common and diffused control system**, including third-party plug-ins for Crestron Home, Control4, AMX and many others, which are available to download in the software and amplifier web pages.

Home entertainment: **the power of sound in visual experiences**

When enjoying films or other visual content at home, the focus often falls on the visual aspects, but the influence of sound on our viewing experience cannot be overstated.

With an appropriately tailored sound system and a multichannel setup, **viewers can truly immerse themselves in the narrative.**

Durability and Maintenance

K-ARRAY speakers will help you meet these demands exceptionally. The speaker's components are chosen for their ability to **withstand the test of time and their capacity to resist varying weather conditions**. Moreover, the system's design facilitates straightforward troubleshooting and repair.

The resilience of K-ARRAY speakers ensures consistent, high-quality and reliable audio performance.

Premium aluminum **millwork**

Discreet solutions for home cinema

K-array revolutionizes audio for large TV screens by overcoming speaker placement challenges with innovative solutions. Utilizing two distinct sound sources above and below the screen, our speakers like the KV52F create **immersive central channel experiences.** With wider emission patterns, such as those of our Vypers, approved by Dolby Atmos, **K-array's technology is now integrated into the HE Home Entertainment Dolby Audio Room Design Tool** for designing immersive Atmos environments effortlessly.

Full range and line array speakers in surround configuration

Surround and multichannel systems revolutionize sound in movies, with **Dolby Surround or Atmos setups** being popular for immersive **home cinema experiences.**

K-array Domino full-range speakers provide comprehensive audio coverage without requiring a separate subwoofer, making them perfect for space-constrained Dolby Surround setups. Their plug-and-play design and compatibility with any amplifier offer a streamlined solution.

In residential spaces or on yachts with unconventional layouts, Atmos and Dolby configurations may face placement limitations. **Our solution involves mounting line array speakers with PAT at elevated positions for consistent sound coverage over longer distances.** Additionally, our KA amplifiers integrate bass management and LFE crossover for seamless integration with Atmos systems.

Challenging outdoor environments with unique and sleek design

Navigating the realm of **yacht audio solutions** presents an intriguing **encounter between luxury, advanced engineering and different entertainment requirements.** Every detail of a yacht's design is meticulously curated, one such critical element being the audio system.

In this environment, the selection and installation of audio systems must be approached with **precision and care to ensure seamless integration** with the yacht's architecture and function. A particular emphasis is placed on the **marine-grade quality of materials** used in these systems. K-ARRAY's audio solutions rise to this challenge, ensuring durability and high performance even in the harsh marine environment. With a focus on **robustness and resistance to water and atmospheric agents**, K-ARRAY's products are specifically **crafted for the outdoors.** The cone drivers are treated for water and corrosion resistance and with a compact, sealed enclosures our speakers maintain high performance under all conditions.

Navigations through space constrains and acoustics

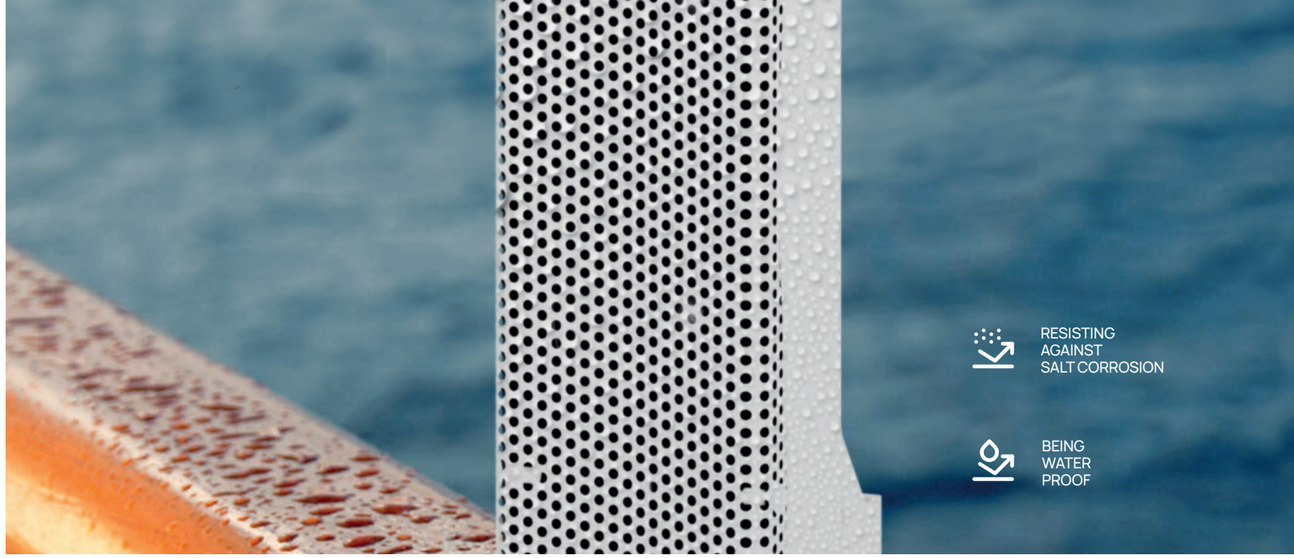

Yachts present an intriguing puzzle of confined and proportionate space where every square inch holds immense value. **Our speakers allow for strategic placement without imposing on the prized space, while their potent output surmounts the acoustic challenges posed by yacht interiors.**

With the most **compact design** and **form factor** they can be seamlessly **integrated into any type of interior, blending perfectly within intricate furniture and environments.**
Such specific yacht requirements and peculiarities are easily addressed by the variety of our **speaker families**, which include a range of **scalable solutions** that always maintain **high performance, definition, and power while ensuring even and immersive coverage across different and constrict areas.**

Crafting unforgettable yacht experiences: **with custom audio solutions**

Each yacht owner takes pride in cultivating a **unique and unmatched style**, aiming to craft a space that effortlessly combines comfort, practicality and luxury. Choosing the perfect dedicated audio solutions and systems for moments of entertainment or relaxation on board is now even simpler, thanks to our **extensive customization options** that include **elegant finishes and carefully selected colors**. You won't need to compromise on any design preferences or specific audio needs.

Marine treatments and dedicated IP accessories included

An epoxy-based Cataphoresis treatment is applied by electroplating on all K-ARRAY's Marine products, ensuring a total coating with homogeneity of constant thickness **to give metal surfaces a considerable resistance to chemical environmental corrosion.**

Nano-powders of Zirconium are used in the formation of phosphate coatings **to improve corrosion resistance and paint durability. Different joining accessories and screws are used to resist corrosion, and chassis are made of only premium materials like resistant stainless steel.** The cone drivers have been **waterproofed and UV proof treated. IP accessories are always included** and in some products the connectors have been replaced with built-in cable gland.

Designing harmonius homes with LIGHT & SOUND

Great residential designers strive to create **memorable and comfortable experiences** that align with a space's aesthetics. One key technique is engaging **as many senses** as possible. KSCAPE developed an **all-in-one** system **combining professional audio performance with high-quality architectural lighting**.

The outcome? A 1.2m (4ft) linear **RAIL** designed to enhance sound and light characteristics in personal spaces. Imagine the opulence of a warm light over the breakfast bar, entertainment room or garden annex where you can **listen to your favorite music without compromising on the aesthetics of the space.**

By harnessing the power of tunable white LEDs, **RAIL enables precise adjustments to lighting color temperature, allowing it to adapt to the natural rhythm of the day.** This thoughtful feature enhances the creation of well-tuned living spaces, promoting comfort and overall wellness.

K-array speakers paired with a variety of optics offer a **unique solution for architecturally challenging residential environments.**

Seamless Integration and Customization: **KSCAPE RAIL's Innovative Lighting System**

When **aiming to preserve the integrity of the current electrical system,** RAIL's Bluetooth **Casambi** lighting control offers significant advantages. It facilitates easy adjustment of light intensity and personalized lighting scenarios. **For advanced installations, opting for DALI control is recommended.** This integration allows RAIL to seamlessly integrate into sophisticated home automation systems, providing centralized and advanced light management.

WARRANTY K-ARRAY 5 YEARS

discover more

K-ARRAY WARRANTY

K-array surl warrants its products against defects in material or workmanship. The term of the **K-array surl Warranty is five years** from the original date of purchase of the product and their accessories. This warranty may be transferred to a subsequent owner during the warranty period. However, such a transfer shall not extend the warranty period beyond the original warranty period of five years from the original date of purchase stated on the invoice from the distributor to the end client.

IMPORTANT:

The configurations showcased in this Catalog are just examples, they don't represent existing projects. While not representing real projects, they can serve as inspiration for what's possible. Dive into our K-array Lookbook to explore specific, well-designed audio projects. Have a project to share? Send your materials to marketing@k-array.com, it might be selected for our next Lookbook.

LEGEND:
