

Description

The Thunder-KS2 I is a compact active subwoofer featuring a 18" cone driver and a powerful 4x 1500W @ 4Ω audio amplifier module with built-in DSP.

The audio power output connectors allow the Thunder subwoofers to drive a wide range of K-array passive loudspeakers. Compatible with midrange loudspeaker and other passive subwoofers, the self powered Thunder subwoofers with DSP are designed to be the core devices in K-array sound reinforcement systems.

The dedicated K-Discovery mobile app provides an user friendly interface for remote control of the DSP main parameters and easy configuration of the signal routing.

K-framework3 is the managing and control software dedicated to professionals and operators looking for a powerful tool for designing and managing a large number of units over a wired LAN in demanding applications.
